

# Gingivectomy

Periodontal Care, P.A.  
*Healthy Gums, Healthy Heart*

## Tissue Removal

In some situations, there can be too much gum tissue present. This often happens following orthodontic treatment. I can also be caused by pregnancy or medications. The gingivectomy procedure is performed to remove the excess tissue, exposing the hiding teeth.

Before

After

## No stiches

This procedure heals quick and there is no need to place stiches.
