

Sinus Lift Bone Grafts

Periodontal Care, P.A.
Healthy Gums, Healthy Heart

Maxillary Posterior Teeth

For the Upper teeth in the back, the maxillary sinus limits the amount of available bone for a dental implant. Two procedures are performed to allow implant placement. A **SINUS BUMP/TAP** is performed when there is 7-9mm of bone and a **SINUS LIFT** is performed when there is less than 7mm of bone.

Sinus Bump/Tap: 4-6 months healing

Sinus Lift: 6-9 months healing
